Summary

Software Development student with a strong focus on backend. I really like solving problems, creating systems and learning about new technologies.

Engaging in diverse personal projects has allowed me to sharpen my technical skills across different environments.

Currently i'm seeking job opportunities to apply my skills while continuing to learn and grow as a professional developer.

Skills

Programming Languages: [C#](#) [Java](#) [Kotlin](#) [Javascript](#) [Typescript](#)

Databases: [SQL Server](#) [PostgreSQL](#) [MongoDB](#)

Technologies: [.NET](#) [Angular](#) [Capacitor](#) [Spring Boot](#) [Maven](#) [SignalR](#) [JWT](#) [Microservices](#) [HTML](#) [CSS](#) [Tailwind](#) [Bootstrap](#)

Tools: [Git](#) [Linux](#) [Docker](#) [Testing](#) [Playwright](#) [CI/CD](#) [GitHub Actions](#) [Cloudflare Pages](#)

Methodologies: [Scrum](#) [Kanban](#) [Agentic AI - Opencode](#)

Projects

Pokémon TCG [\[Live\]](#) [\[Repo\]](#)

[Java 21](#) [Spring Boot](#) [JWT](#) [WebSocket](#) [PostgreSQL](#) [Flyway](#) [Docker Compose](#) [Angular](#) [TypeScript](#)

Digital version of the Pokémon Trading Card Game developed as a university project for UTN. Built with a Spring Boot backend in Java 21 and an Angular frontend, it features a custom game engine that handles turns, attacks, damage calculation, special conditions and victory conditions. Real-time multiplayer synchronization is achieved through WebSocket, with PostgreSQL for persistence, Flyway for database migrations, and Docker Compose for containerized infrastructure.

Tattoo Portfolio [\[Live\]](#) [\[Repo\]](#)

[Angular](#) [TypeScript](#) [Signals](#) [OnPush](#) [Google Apps Script](#) [Cloudflare Pages](#)

Portfolio website for tattoo artist Bianca. Built with Angular and TypeScript using Signals and OnPush change detection, it features a gallery with lightbox and a contact form integrated with Google Apps Script, deployed on Cloudflare Pages.

- Security: 3-layer anti-bot system (honeypot, timing and rate limiting)
- Strict input validation and contact data obfuscation against scraping

Full-stack Real-Time Chat Application [\[Live\]](#) [\[Frontend\]](#) [\[Backend\]](#)

[C#](#) [SignalR](#) [Websockets](#) [JWT](#) [PostgreSQL](#) [ASP.NET Core](#) [React](#) [Tailwind](#)

Developed a scalable **real-time** messaging platform in a collaborative environment using SignalR for low-latency, bi-directional communication. I was involved in both the frontend and backend development.

Education

National Technological University (UTN), Higher Technician in Software development
