Summary

Software Development student with a strong focus on backend. I really like solving problems, creating systems and learning about new technologies.

Engaging in diverse personal projects has allowed me to sharpen my technical skills across different environments.

Currently i'm seeking job opportunities to apply my skills while continuing to learn and grow as a professional developer.

Skills

Programming Languages: C#, Java, Javascript, Typescript

Databases: SQL Server, PostgreSQL, MongoDB

Technologies: .NET, Angular, Spring, Maven, HTML, CSS, Tailwind, Bootstrap

Tools: Git, Linux, Docker (learning)

Projects

****Full-stack Online Multiplayer Board Game (El Estanciero) ****

Collaborative development of a digital version of "El Estanciero", featuring **real-time** gameplay, user authentication, complex business logic, and persistent game states. I was involved in both the frontend and backend development.

- Backend Repo: RESTful API in Java, Spring Boot, SQL Server, JWT auth
- Frontend Repo: Angular, Typescript, Tailwind
- Architecture: Repositories, Services, Models, Handlers

Full-stack Real-Time Chat Application

Developed a scalable **real-time** messaging platform in a collaborative environment using **SignalR** for low-latency, bi-directional communication. I was involved in both the frontend and backend development.

- Backend Repo: C#, SignalR, Websockets, PostgreSQL, ASP.NET Core
- Frontend Repo: React, Tailwind

Education

National Technological University (UTN), Higher Technician in Software development
